

Configure Unmanaged Processes

- Please make sure you have a single [OpenLM Server installation](#) on a central network server.
- Be sure to [install OpenLM Broker](#) on the license server.
- Also make sure you have an [OpenLM Agent installation](#) on the end-user workstation.
- Be sure to follow the [Agent Procedures configuration](#) process.
- Click **Start** -> **Administration** -> **Unmanaged Processes**.
- Click **Add Vendor** -> **Name** the new vendor -> Click **Add** -> Input the following details:
 - **Feature Name** -> A descriptive name of the feature (Like AutoCAD, Siemens NX, etc.).
 - **Process Name** -> the application process name itself (Like acad, ugraf etc.).
 - **Description** -> Free field for adding feature description.
 - Click **Save**.
- Select the new feature from the bottom list -> Click **Edit** -> Check the box **Enabled** -> Fill in the following:
 - **Quantity** -> How many workstations with the applications you are monitoring or how many licenses are allocated to this application.
 - **Track Process idle time** -> Apply if you want to track end-user applications idle time -> Set to 1 minute.
 - **Process release method** -> Select **Procedure** -> Select **procedure name** by clicking **+**.
 - Check the box **Enable automatic process release functionality**
 - **Start releasing processes after usage rate of** -> Set the usage threshold you want to start closing processes if surpassed.
 - **Idle Time Release Threshold** -> Idle time threshold for closing applications.
 - (Please note that both thresholds have to be surpassed in order to close a session)

- Click **Save**.
- Continue with configuring other [OpenLM Extensions](#).
- See the [Reports of OpenLM](#).
- See [full documentation](#).
