

We have received requests from our customers to provide an interface for report content printing. Apparently some users still feel more comfortable presenting OpenLM usage reports and statistics on sheets of paper.

We have accommodated this request, and added an icon at the bottom of each EasyAdmin grid window (e.g. "License servers", "License Activity" etc.).

In order to print a report:

1. Click the printer icon. A browser tab entitled "Print view" with printable content opens.
2. On the new browser window right-click to select the 'Print' menu
3. Follow the specific preferences that had been configured for printing on your machine.

See the image below for clarification.
