STRETCHING YOUR LICENSES TO THEIR LIMIT

OPENLM CLOUD PORTAL

WWW.OPENLM.COM

Table of contents

What is the OpenLM Cloud Portal ?

The Cloud Portal is a Platform as a Service or PaaS provided to you by OpenLM.

Currently includes five products:

- Software License Management Cloud Directory Sync
- LDAP Connector
- OneDirectorySync
- Virtual License Manager

We are just getting started. More products will be added in the future.

Why Cloud?

OPENLM
STRETCHING YOUR LICENSES TO THEIR LIMIT

Hassle-free configuration

No installation. Requires minimum infrastructure and hardware. It takes just a few minutes to configure.

Access anywhere at anytime

No burdens in accessing and managing your licensing data, regardless of space and time.

Security and compliance

Secure environment guaranteed. Data is protected via OpenID Connect and OAuth 2.0 protocols.

Software License Management Cloud

Provides all the essential engineering software license tracking capabilities and reports you need. You can optimize your software inventory, helping you to stretch those expensive software licenses to their limit.

☑ **30 days free trial**

☑ **24/6 support from Sales & Support**

What can you do with Software License Management Cloud?

|	GAIN VISIBILITY	GOVERN ALL LICENSES	OPTIMIZE LICENSE UTILIZATION	STAY COMPLIANT	REDUCE LICENSE SPENDING	EASY-TO-USE TOOLS
01	Get full visibility of the license inventory	Single common reporting format	Comprehensive license harvesting technology	Maintain an accurate and objective history of license and token usage.	Buy only the licenses you need based on accurate reports on peak usage.	Manage all your licenses in one place with easy-to-use tools.
02	Know the actual usage of the organization's engineering applications.	Get a centralized view of all the organization's license managers.	Automate the safe release of expensive licenses sitting idle on end users' workstations.	Reports written from your viewpoint, not the vendor's	Identify and eliminate shelfware.	Allocate or revoke access based on directory groups.
03	Always know which licenses are in use	Manage all your software assets with ease.	Notify the end user requesting a license of its availability.	Get access to accurate license utilization reports.	Avoid costs incurred for features your engineers don't use.	Understand how the organization's licenses are actually used.
04	and which lie underutilized,	-	Empower your users with licenses.	Prove your point when the vendor's license management software is out of sync with your actual usage.	Get a precise view of the licenses the organization requires for the next renewal.	Detect and handle license server issues before your engineers even notice them.
05	Eliminate: • audit risks, • inefficient usage of licenses, • inaccurate forecasting.

Directory Sync

OpenLM Directory Sync enables organizations to synchronize their OpenLM database with their primary directory service. Currently, this is possible for directories that use the LDAP protocol (e.g. Active Directory, ApacheDS, Novell eDirectory, Google Directory, Azure AD, AWS directory).

✓ **30 days free trial**

✓ **24/6 support from Sales & Support**

Requires an active Software License Management Cloud subscription.

OPENLM
STRETCHING YOUR LICENSES TO THEIR LIMIT

What can you do with Directory Sync?

See your end users

- Import the information you have on the organization's users and groups.
- Use OpenLM to clearly set the rules for who has access to which license and when.

Automate license rules

- Let OpenLM do the heavy lifting.
- You set the stage by allowing or restricting license access.
- OpenLM will automatically apply the rules organization-wide.

Chargeback made easy

- Track software license usage according to user or group.
- Forget about a centralized budget for licenses.
- Allocate license utilization costs to the business unit(s) consuming them.

Enrich usage reporting

- Access license utilization insights with ease.
- Find out which end user is utilizing which license and for how long.
- Visualize license utilization according either to user or group.

LDAP Connector

The LDAP Connector enables software vendors to integrate an organization's Active Directory or any other LDAP directory into their software.

✓ **30 days free trial**

✓ **24/6 support from Sales & Support**

What can you do with the LDAP Connector?

Simplify Administration

- Connect people and software/technology easily and quickly via LDAP Synchronization.
- Deploy LDAP Connector to start synchronizing Active Directory or other directory services data with your software.

Speed up app deployment

- Be bold, be modern: integrate your app with the customer's identity management service out-of-the box.
- Reduce time required to market the software.
- Synchronize and unify the identity data of your customer with LDAP Connector, and reduce costs while capturing new business opportunities.

Reduce TCO

- Eliminate the need to create another application-specific directory.
- Cut down your time and expenses in integrating your application with the organization's directory service.
- Empower customers to have direct access to your product based on the organization's directory, thus saving time.

Scalable Architecture

- Built using a flexible architecture.
- Adapts to any organizational environment.
- Stress-tested with hundreds of thousands of users.
- OpenLM's LDAP Connector supports all popular directories that "speak" the LDAP (Lightweight Directory Access Protocol) "language".

OneDirectorySync

The single source of truth

Manage only one directory, we will do the rest. The changes made in your organization's primary directory will be automatically synced with all connected directories. Don't lose control over your cloud services. Automatically remove stale accounts from the digital workspace.

☑ **30 days free trial**

☑ **24/6 support from Sales & Support**

What can you do with OneDirectorySync?

Eliminate security hazard

- Synchronize changes made in the primary directory.
- Replicate the change in any number of SaaS, IaaS, or PaaS services, such as Google Analytics, Firebase, Azure AD, GitLab, Salesforce, GitHub, Frontegg, Cloudflare, Buddy, Odoo, Jira, and more.
- Eliminate stale accounts.

Single source of truth

- Manage just the organization's primary directory.
- When you make a change, it will be automatically replicated to all your cloud services, network appliances, routers, and VPNs.

Off-board instantly

- Simplify user off-boarding.
- Central hub connecting all the resources of your digital workspace with your primary directory.

Cloud directories hub

- More than just synchronization as a service
- Connects your primary directory to all external services, such as Google Analytics, Azure AD, Gitlab, Salesforce, Frontegg, Cloudflare, and many more.

Virtual License Manager

OpenLM creates a virtual layer on top of your physical license manager and allows you to bulk assign licenses to your organization's various departments. You can select all products and their features, or just certain features, and automatically allocate licenses to all existing and new users of the selected department in an organization.

Prevent unauthorized license checkout to streamline workflow throughout the organization. Ensure every end user has access to the license he or she needs.

☑ **30 days free trial**

☑ **24/6 support from Sales & Support**

Requires an active OpenLM Software License Management subscription.

OPENLM
STRETCHING YOUR LICENSES TO THEIR LIMIT

What can you do with OpenLM's Virtual License Manager?

Unified view of resources

OpenLM collects all the necessary information license managers need to plan allocation of licenses to the organization's departments. It collects

- Data about available resources (purchased licenses and features) from the license management software provided by the vendor, and
- Provides the right tools to customize the organization's resources to each department.

Customized license allocations

Use VLM to right-size licenses as per the needs of the different departments within the organization. How does it work?

- Select the licenses and features you want each department to access, and create a virtual license pool.
- After creating the pool, you can allocate it to a specific department and assign managers to the freshly created pools.

Streamlined license management

OpenLM's VLM tool provides two roles by default:

- Primary admin (system admin, who allocates licenses to various departments)
- Secondary admin (view the licenses allocated to the department he or she manages and allocate licenses to end users)

Easy resource management

The initial pool you have allocated to a department may suffice, but you need to ensure all end users have access to licenses for a seamless production workflow. OpenLM provides you with the right tools to keep license pools in alignment with a department's needs. You can easily

- allocate more licenses to a specific department if license use data justifies it.
- Or you can remove licenses from the pool if you notice that end users are not maximizing the value of the asset they have been allocated.

Virtual License Manager pricing

$1/month/license
