

# Virtual License Manager (VLM)

PRODUCT IN-DETAILS (AVAILABLE ON OPENLM CLOUD PORTAL)

[www.openlm.com](http://www.openlm.com)

## What is a Virtual License Manager (VLM)?

Virtual License Manager allows IT, managers, to segment the organization's license portfolio into as many license pools as needed, whether by department, region, or team.

Armed with a rock-solid, role-based access control system, VLM empowers IT administrators to delegate an administrator to each license pool. The administrator is empowered with the right toolset to:

- Allocate licenses to end users
- Revoke access from end users

**Extra secure - VLM:** Delegated license administrators, however, don't have access to the main central license administration interface, which means they cannot break the system. That level of access is reserved for the central IT manager

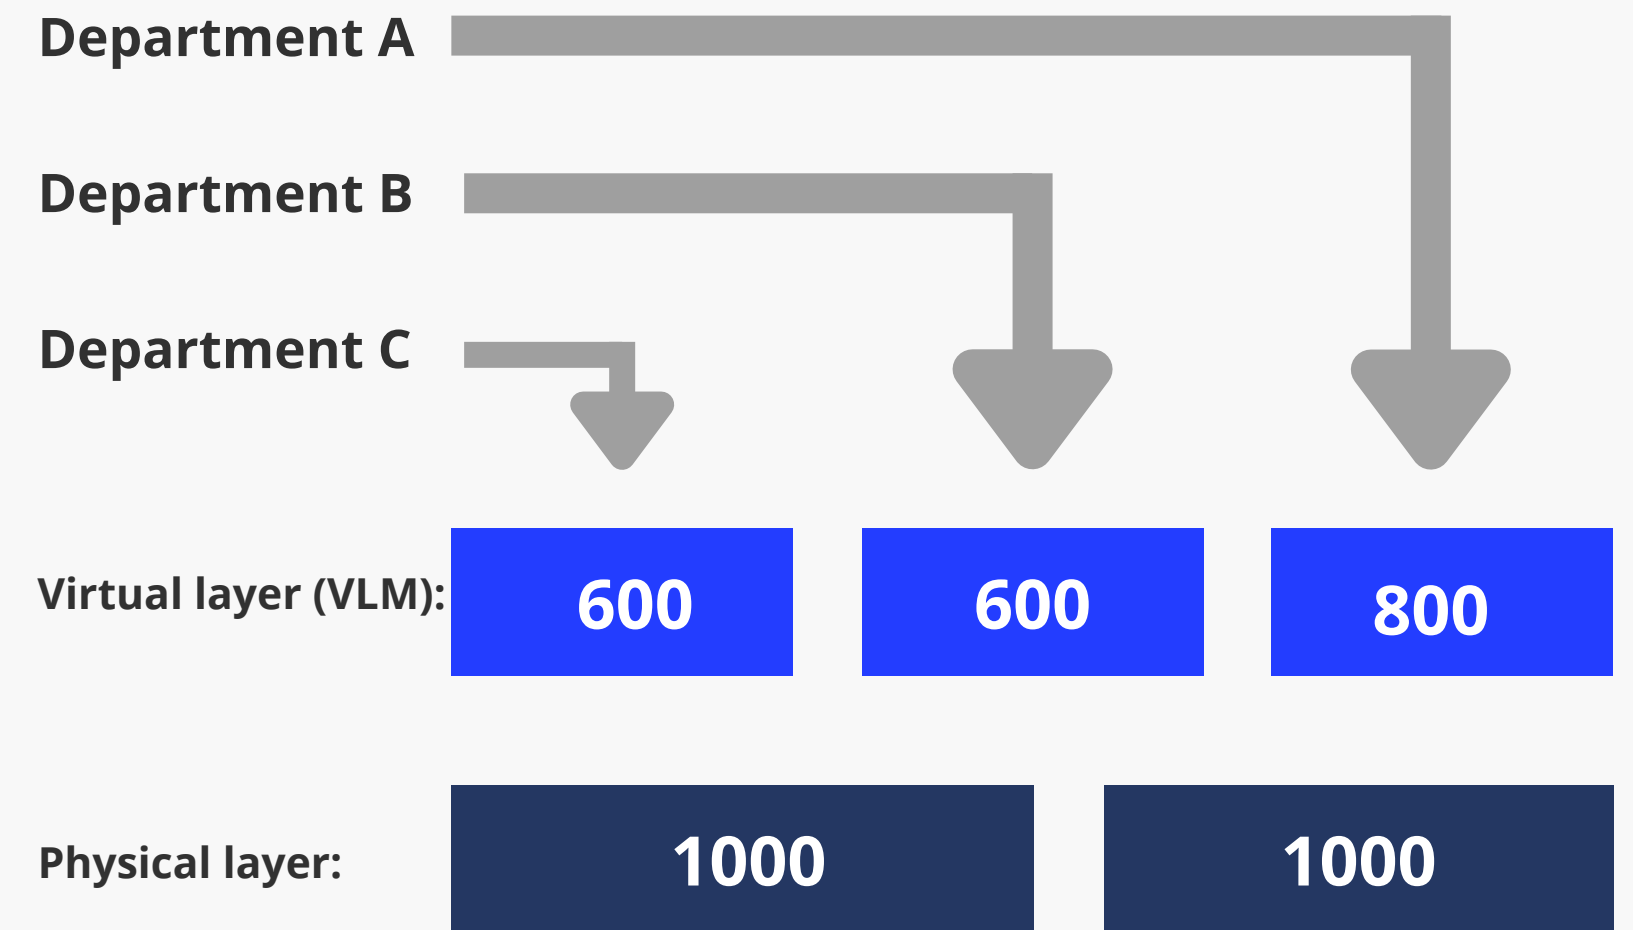

## The technology behind VLM

- It sits on top of the physical license manager on a virtual layer.
- This allows us to give the power to IT admins - to slice the consolidated license portfolio into as many small license pools as the organization needs.

### VLM gives IT administrators the power of flexible provisioning:

- Easy-to-use interface to consolidate the organization's resources;
- The right toolset to create virtual license pools;
- The ability to assign managers to license pools, who can then grant or revoke licenses as required.

**Smart, real-time, dynamic allocation of software licenses basis the department's requirement, and availability of licenses in the physical layer.**

## The technology behind VLM

- It sits on top of the physical license manager on a virtual layer.

Departments  
are looking for:

Department A 800 Licenses to be allocated

Department B 600 Licenses to be allocated

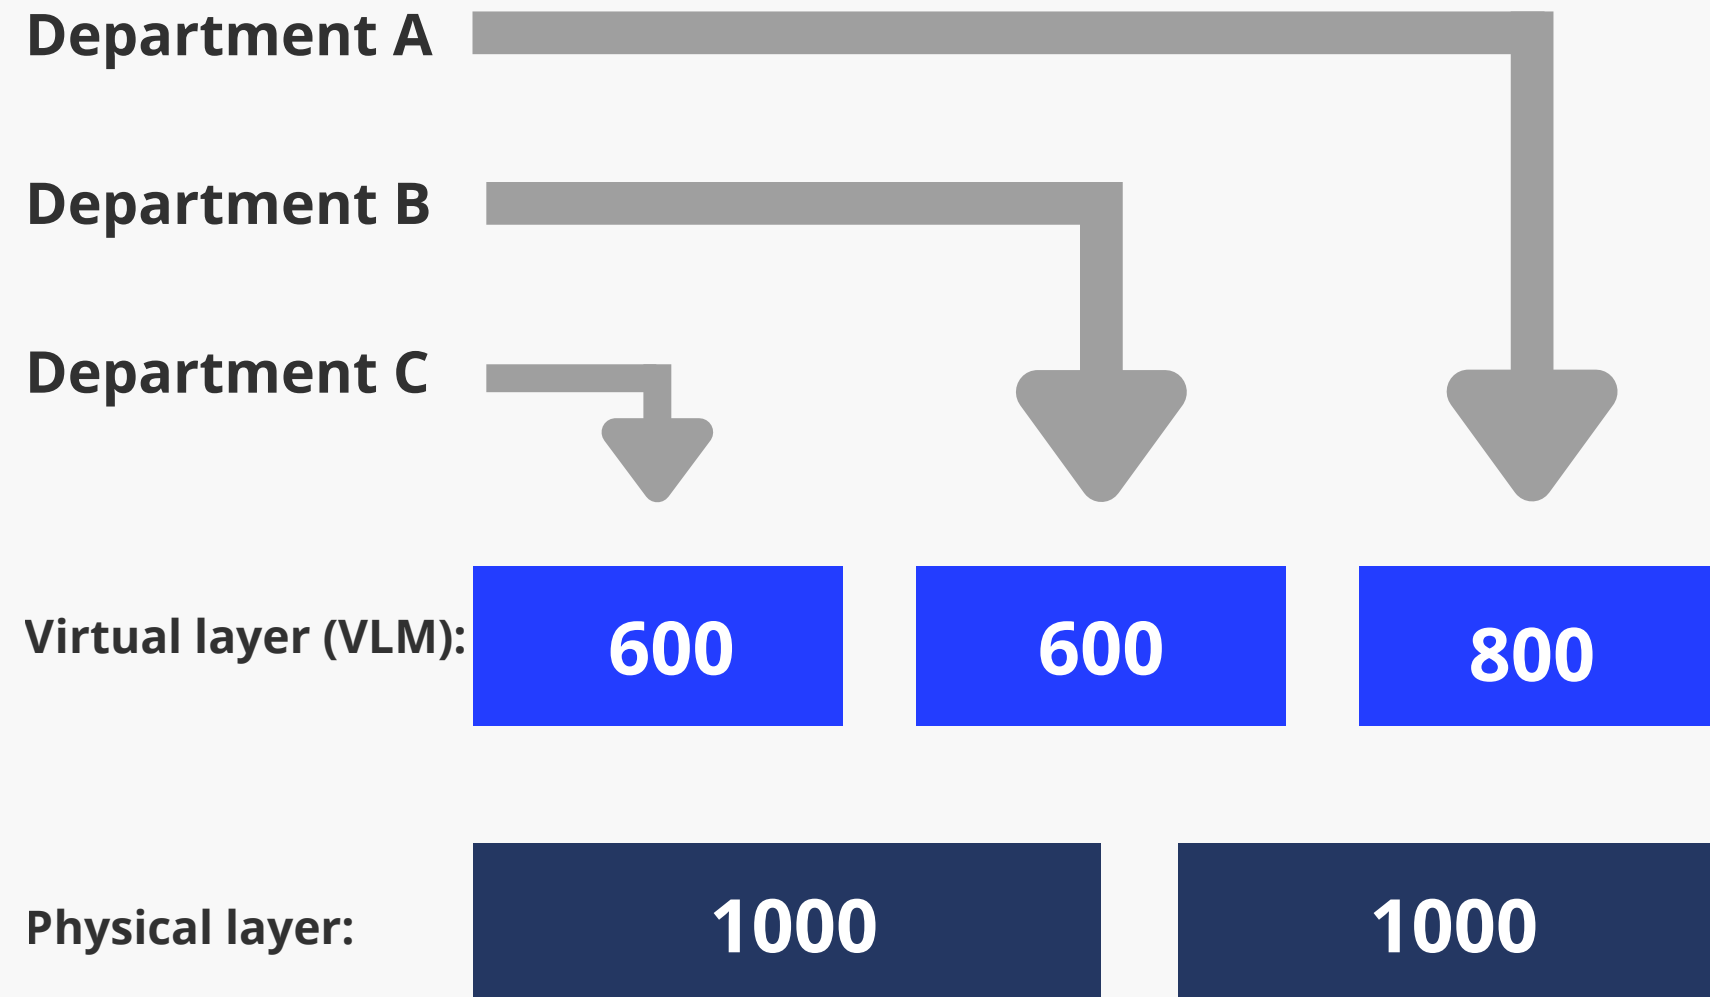

Department C 600 Licenses to be allocated

Physical layer (License  
Managers on various  
License Servers):

1000

1000

## Virtual License Manager (VLM)

Smart, real-time, dynamic allocation of software licenses basis the department's requirement, and availability of licenses in the physical layer.

# Virtual License Manager (VLM) - the challenge & solution

## Challenge

- Due to pricing reasons organization has one license manager with 100 features.
- The organization wishes to provide allocation capabilities to 5 departments. (every 20 licenses)
- Departments overwrite each other's settings.

## Solution

We wish to dedicate a set number of licenses to each departments with no conflicts

## Key benefits of VLM

- ✓ Allocate, and manage software licenses in real-time. Gain efficiency and productivity.
- ✓ Saves IT managers', license managers', and system admins' time from manually allocating licenses.
- ✓ Increases license availability between various departments with ensuring optimal license usage with the same no of licenses thus protecting IT costs from an increase/significant increase.
- ✓ increases productivity of users, departments, teams locally and globally.
- ✓ Grant users permissions for different departments to manage their licenses smartly with better visibility without compromising the security of the main system.
